

SoilMarkers™ 700 Series

Reduce damages in landscaped areas

The 700 Series RhinoPoly™ SoilMarker allows you to protect buried facilities under lawns and landscaped areas. Brightly colored, UV stable SoilMarkers will not interfere with property owners or maintenance activities.

"The SoilMarkers are fantastic and very durable."

Proven Performance

In use for over 15 years in residential and commercial settings. Tested in-house and by outside labs.

Durable

RhinoPoly construction means the markers can be walked on, driven over, or even parked on, and will not break, crack, or significantly fade for at least 10 years.

Vandal Resistant

13" stakes with barbs cannot be easily removed. Rolled edges help lock the marker in place.

Options

Add terminals to the SoilMarker for easy access to tracer wire or add an optional metal disc to make the 700 Series locatable.

Installation

Insert the 13" stake into the 7" disk and drive into soil until flush.

SoilMarkers™ 400 Series

Protecting assets in urban and suburban areas

The Rhino 400 Series SoilMarker is a lower profile way to mark buried facilities in areas where homeowners will not tolerate upright marking posts or unsightly signs.

Durable construction

RhinoPoly construction makes the SoilMarkers extremely durable. They will not crack, break, or significantly fade for at least 10 years. The one piece design has a 4" surface and an 8" stake.

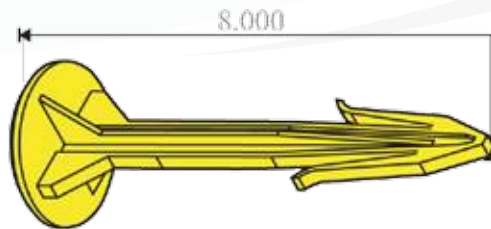

Versatile

The 400 Series SoilMarker is excellent for temporary or permanent marking of almost everything. They are available with or without a barbed stake, making it an ideal choice for temporary marking.

Temporary uses: White markers can be used to identify proposed digging areas.

Permanent uses: Golf courses, sewer laterals, fiber to the home, sprinkler lines, gas distribution lines, stub ends, survey markers, service drops, etc. The warning message is permanently molded into the marker and can be mowed over with no damage.
