

SEWER DRAIN SNAKE CABLES

Standard sewer pipe cables (left-hand coiled) are our most popular cables used for general purpose cleaning. Shown with optional E 01 cable end.

Innercore plumber snake cables (left or right-hand coiled) are for heavy duty jobs. When under pressure or torque, the outer coil tightens around the inner core, stiffening the entire cable.

Downhead drain snake cables (left or right-hand coiled) feature a downhead to help negotiate turns and bends in pipe lines.

Bulbhead drain snake cables up to 13/32" in diameter (left or right hand coiled) have flexible, large diameter open coiled ends that follow the turns of sewer lines with ease and efficiency.

Bulbhead pipe cables from 3/8" in diameter (left-hand coiled) add flexibility and with installed plug and knife allow you to cut through the toughest obstructions.

CABLE DIAMETER AND LENGTH	STANDARD CABLES										INNERCORE CABLES			DOWNHEAD			BULBHEAD		
	LEFT HAND			RIGHT HAND			LEFT HAND			RIGHT HAND			LEFT HAND			RIGHT HAND

OTHER PIPE SNAKE CABLE DIAMETERS AND LENGTHS AVAILABLE, PLEASE INQUIRE

Gorlitz plumber snake cables are made of the finest hard drawn, heat-treated, high tensile strength music wire. Very tough but providing the greatest amount of flexibility and improved fatigue life, each cable is manufactured using our stress relieving process that sets the coils to retain their tension. This new and superior process stabilizes the molecular structure of the coils and therefore ensures higher quality, longer life and less kinking and breaking. We offer different types of left-hand or right hand coiled sewer drain pipe cables including hollow core or inner core, with downhead or bulbhead attachments. All standard cables 1/4" - 5/16" in diameter are not available with cable ends, while 3/8" - 1/2" in diameter cables have optional cable ends. Standard cables 5/8" - 3/4" in diameter include cable connectors.
